MONEY PUZZLE

Investing isn't a bet — it's a puzzle

Quant-based robo-advisor · Money Puzzle

Investor deck · Booman Inc. · October 2026

PROBLEM

Retail investors hit three walls

Information is scattered, decisions are gut feel, advice is out of reach

1 Hopping between apps

- Quotes in the broker app, news on portals, filings on DART
- Dozens of taps through tabs and menus to understand one stock
- And 'my portfolio' is never visible at a glance

2 All-in on one stock

- Picks come from paid chat rooms and word of mouth
- Buy and sell timing is gut feel
- Risk piles up in one place

3 Advice is distant and expensive

- Private banking serves mainly the wealthy
- Robo-advisors show results but never 'why'
- Number-heavy tables are hard for beginners

Scattered info · concentrated risk · distant advice — solved with one scroll

SOLUTION

Like a webtoon — one scroll, one screen

No tabs to tap. One thumb: market → my profile → picks → stocks · news · filings

① Market · virtual account

② Profile · picks

③ Stock lookup · chart

④ Filings · news · disclaimers

Why a webtoon

- A gesture everyone already knows
- The flow never breaks — each screen explains the next
- Korea · US on one line
- See → understand → buy, in one pass

PRODUCT

Three apps — one to view, two to trade

Public

Money Puzzle Stock

Asset allocation by risk profile · Korea & US

Virtual portfolio · past returns

Real-time quotes

No order function

Founder pilot

Money Puzzle HTS

Live trading app linked to brokerage accounts

Basket trading of profile-matched portfolios

Monthly rebalancing

Demo open (/review/)

New · 2026.10

Money Puzzle Mini

A light trading tool for people in their 20s–30s

Watchlist · charts

3-year income statement

No recommendations

PRODUCT

One screen — stocks · my P&L

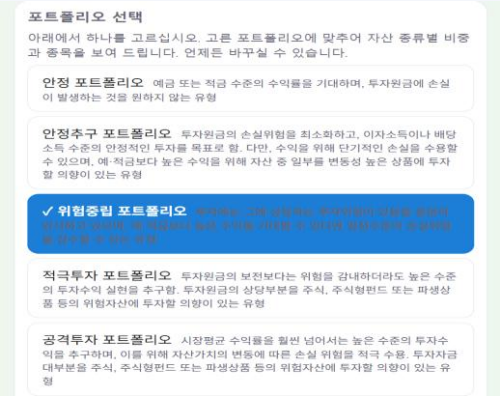

From left — stock lookup & chart · cumulative P&L and asset mix by profile

HOW IT WORKS

Three steps to my portfolio

Answer 7 questions → an asset mix that fits you, plus this month's picks

1 Risk profile

KOFIA standard 7 questions → five levels, Conservative to Aggressive

2 Asset allocation

Asset mix ratio by profile + picks per asset class (KR · US ETFs · stocks)

3 Buy as a basket

Buy many names at once · rebalance on the 1st of every month

Quant-based robo-advisor

Data, not gut feel — pick with a proven momentum factor, trade by fixed rules

1 Blue chips only

- Top 50 by market cap, Korea & US
- ETFs in four groups: KRW/USD × plain/leveraged
- No inverse, ETNs or structured products

2 Uptrends only

- Only stocks above their 200-day average
- Downtrending stocks never make the ranking
- Stocks that closed limit-up the day before are excluded

3 Pick the 12-month leaders

- Rank by 12-month return, skipping the latest month
- 5 stocks · top 1 per ETF asset class
- Re-picked on the 1st of every month

★ **Core strategy — Core + Satellite**

Index ETFs (core) capture market return; 12-month momentum names (satellite) add excess return
6-year backtest · 0 of 100 random draws beat this rule · with auto-trading on, it's quant algorithmic investing

PROVEN RESULT

Side by side with the indices — verified past returns

If each app profile portfolio had started 1, 2, 3 years ago under today's engine rules

Term	Cons.	Mod. cons.	Moderate	Growth	Aggr.	KOSPI	KOSDAQ	S&P500	Nasdaq	Dow
1Y	+3.2%	+25.7%	+39.3%	+71.3%	**+129.9%**	+104.8%	+5.6%	+16.4%	+21.2%	+10.8%
2Y	+6.4%	+38.2%	+65.2%	+102.1%	**+217.1%**	+171.7%	+21.8%	+42.6%	+59.9%	+28.1%
3Y	+9.7%	+43.4%	+117.1%	+138.0%	**+318.1%**	+174.9%	+0.6%	+81.0%	+107.0%	+54.9%

Aggressive, 3 years: +318% — outperformed every index over the same period

Median of 20 start dates → 2026-10-02 · in KRW (US indices converted) · rebalanced monthly on the 1st · stock stop −15% · portfolio +30/−20% · idle cash, deposits, MMF at 3%/yr

KOSPI's 1–2Y surge was a concentrated market: SK hynix and Samsung Electronics made up 64–75% of the market-cap gain

PROVEN RESULT

When markets shook — we fell less

Largest drop over the same period (max drawdown)

Term	Cons.	Mod. cons.	Moderate	Growth	Aggr.	KOSPI	KOSDAQ	S&P500	Nasdaq	Dow
1Y	0.0%	−8.5%	−12.8%	−17.5%	−15.3%	**−38.6%**	**−47.4%**	−12.5%	−14.9%	−15.1%
2Y	0.0%	−8.5%	−13.3%	−17.5%	−18.4%	**−38.6%**	**−47.4%**	−17.8%	−23.1%	−17.0%
3Y	0.0%	−8.5%	−16.9%	−17.5%	−19.3%	**−38.6%**	**−47.4%**	−17.8%	−23.1%	−17.0%

※ KOSPI/KOSDAQ MDD comes from the 2026 sell-off inside the last year, so 1/2/3Y values match.

All five profiles
KOSPI −38.6% · KOSDAQ −47.4%
— all fell less than these

PROVEN RESULT

Risk-adjusted too — twice the index

Not just return — 3 years by volatility (std. dev.) · return per unit of risk (Sharpe) · max drawdown

3Y	Cons.	Mod. cons.	Moderate	Growth	Aggr.	KOSPI	KOSDAQ	S&P500	Nasdaq	Dow
SR	—	1.23	1.68	1.47	1.88	**1.03**	**0.08**	0.96	1.00	0.72
Vol	0.0%	7.1%	13.5%	17.9%	24.5%	**34.1%**	**33.0%**	18.4%	23.0%	17.3%
MDD	0.0%	−8.5%	−16.9%	−17.5%	−19.3%	**−38.6%**	**−47.4%**	−17.8%	−23.1%	−17.0%

※ 3Y · median of 20 starts · Sharpe = (return − 3%) ÷ vol · β/α vs KOSPI 50 + S&P 500 50

Return per unit of risk (Sharpe) · 3Y

Aggressive 1.88

About 2× KOSPI 1.03 · S&P 500 0.96

Volatility & excess return vs market (Aggressive · 3Y)

β 1.00 α +19.4%/yr

Moves like the market · beats it by 19%p a year

WHY US

What's different — how you see it and how it flows

	Typical broker app	Robo-advisor	Money Puzzle
Screen flow	Tabs · menus	Mostly a results screen	**One vertical scroll**
Unit of advice	Single stocks	Portfolio	**Profile portfolio + stocks**
Presentation	Number tables · charts	Pie chart	**Puzzle · 3D tower · tree**
Asset coverage	Mostly in-house products	Mostly in-house products	**Korea · US on one screen**
Evidence disclosed	—	Partial	**Validation documented**

Comparison is by typical service type

Market — already a big market in the US

	Wealthfront	Betterment	M1 Finance	Money Puzzle
AUM	About $95B	$70B+	About $12B	**Running virtual portfolios**
Customers	1.4M+	1M+	1M+	—
Model	Automated allocation · rebalancing	Automated allocation · advisor platform (B2B)	Pie portfolios · auto-rebalancing	**ETF core + quant satellites · Korea & US in one portfolio**
Fees	0.25%/yr	[Unverified]	[Unverified]	**[TBD]**

Valuation What allocation-automation apps are worth — Wealthfront pursuing a Nasdaq listing (WLTH), $8–10B valuation discussed

Path via innovative financial service (sandbox)

B2B

Broker PB tool license

A face-to-face advisory screen PBs use with clients

Partnerships

Order-routing fee sharing

Partner broker accounts · order integration
Basket buys · monthly rebalancing orders

Value to brokers More orders and more deposits per customer → higher broker fee income (next two slides)

Higher broker fee income

The app itself is designed as a kind of sales machine.
Its trading style draws customers in and keeps deposits coming

1 Portfolio-level Basket buys · monthly rebalancing

- Buy many names as one basket, per the asset mix
- Auto-sell at stock stop or account-wide limits
- **All customers rebalance on the 1st · orders in bulk**
- **Deposits auto-bought toward target weights**

e.g., one Aggressive customer
Up to 16 names per monthly rebalance (2 core ETFs + 14 picks)
12 times a year × 16 names = up to 192 rebalancing orders (buys)
Extra basket buys with every deposit

More orders per customer
= more fee income

Higher broker deposits

Holding a profile portfolio at target weights takes real money.
The more aggressive the profile, the more names to hold — customers grow deposits on their own

Profile	Names	1 share of every name	Within 0.5%p of target	Name that sets the amount
Conservative	0	Not needed · leftover cash goes to MMF	—	—
Moderately conservative	1	≈ KRW 0.11M	≈ KRW 0.56M	KODEX 200 · target 20% · 1 share ≈ KRW 0.11M
Moderate	3	≈ KRW 1.17M	≈ KRW 4.12M	SPY · target 25% · 1 share ≈ KRW 1.03M
Growth	10	≈ KRW 3.82M	≈ KRW 131.42M	Samsung Electro-Mechanics · target 1.2% · 1 share ≈ KRW 1.58M
Aggressive	16	**≈ KRW 10.95M**	**≈ KRW 236.55M**	Samsung Electro-Mechanics · target 0.7% · 1 share ≈ KRW 1.58M

e.g., Aggressive — 1 share of all 16 ≈ KRW 10.95M · at target weights ≈ KRW 237M
Even short on cash, you buy 1 share,
→ the more you deposit, the closer to target weights · picks change monthly
※ 2026-10-02 pick list · closing prices, FX 1,346.8 KRW/USD

More deposits per customer
= more deposits

APPENDIX

① Yearly returns — not a single negative year

Profile portfolios vs indices · by year

	2023 (from start)	2024	2025	2026 (~10/2)
Conservative	+0.9%	+3.1%	+3.1%	+2.3%
Moderately conservative	+2.3%	+0.6%	+18.0%	+18.0%
Moderate	+4.8%	+19.5%	+33.2%	+30.3%
Growth	+4.8%	+17.4%	+41.7%	+36.6%
Aggressive	+8.0%	+35.6%	+32.5%	+115.5%
KOSPI	+4.2%	−9.6%	+75.6%	+66.2%
KOSDAQ	−2.4%	−21.7%	+36.5%	−3.5%
S&P500	+3.2%	+41.6%	+14.0%	+8.7%
Nasdaq	+5.5%	+47.7%	+17.9%	+12.7%
Dow	+5.2%	+29.6%	+10.7%	+2.5%

All five profiles positive in all four years · KOSPI −9.6% in 2024; KOSDAQ −2.4% in 2023, −21.7% in 2024, −3.5% in 2026
Median of 20 start dates 3 years ago (2023-09-05 to 10-02) · same yardstick as the 3Y returns on slide 8 · rebalanced monthly on the 1st · KRW (US indices converted) · deposits/MMF at 3%/yr

APPENDIX

② What lifted KOSPI: chip concentration

What was behind KOSPI beating our portfolios (2025 · 2026)

Stock	2023 (9/25~)	2024	2025	2026 (~9/23)	3Y cumulative
SK hynix	+21%	+23%	+274%	+186%	+1,492%
Samsung Electronics	+13%	−32%	+125%	+139%	+313%
Samsung Electro-Mechanics	+11%	−19%	+106%	+489%	+985%
SK Square	+21%	+51%	+364%	+221%	+2,624%
KOSPI index	+6.4%	−9.6%	+75.6%	+68.0%	+183.7%
Of each year's total KOSPI market-cap gain, the share taken by Samsung Electronics and SK hynix	53%	—	47%	77%	64%

Why KOSPI led

- A few large caps surged — a cap-weighted index rides the names whose weight grows
- Our picks are equal-weighted — built to avoid concentration, so it lags in such markets and defends when large caps turn
- Two-thirds of Aggressive's Korean equity is a KODEX 200 core — it rides large-cap rallies too
- The portfolio is diversified — even Aggressive holds only 10% Korean stocks; the rest is US stocks and ETFs

3Y cumulative = compounded yearly returns · share based on the market-cap gain of the 788 Korean stocks in our data · 2024 excluded (total shrank)

APPENDIX

③ Return vs volatility — Aggressive #1 over 3Y

Volatility · return ÷ volatility · positive months · worst month

	3Y volatility	Return ÷ vol, 1Y	2Y	3Y	Positive months (3Y)	Worst month (3Y)
Moderately conservative	7.1%	2.35	2.17	1.86	63%	−4.1%
Moderate	13.5%	2.14	2.24	2.22	68%	−10.5%
Growth	17.9%	2.79	2.52	2.24	63%	−12.4%
Aggressive	24.6%	3.62	2.88	2.57	71%	−14.6%
KOSPI	34.3%	1.94	1.62	1.21	58%	−22.2%
KOSDAQ	33.1%	0.12	0.22	0.06	55%	−21.4%
S&P500	18.4%	0.75	0.95	1.22	71%	−8.0%
Nasdaq	23.1%	0.76	1.04	1.20	68%	−10.8%
Dow	17.4%	0.48	0.67	0.92	66%	−7.6%

Volatility = daily return std. dev. × √252 · return ÷ vol = annual return ÷ annual vol (higher = more earned for the same swings) · Conservative excluded (deposit assumption only)
Each period started that day and run under today's engine rules · KRW · through 2026-10-02

APPENDIX

④ How picks are chosen — better than random?

Aggressive (two-thirds core) · 1st of each month · annual return and MDD, changing only the pick method

Aggressive	Annual to 2025-12	Annual to 2026-10	MDD (full)
Adopted: 12-month return + stop −15 · portfolio +30/−20	+22.6%	+33.7%	−19.7%
12-month return only (no stop)	+24.7%	+34.8%	−38.9%
Index ETFs only (same weights)	+23.4%	+28.7%	−29.2%
100 random draws — median	+20.4%	+23.3%	—
Best of 100 random draws	+25.2%	+31.0%	—
Previous engine: Hull rule, 12 slots (old 09-25 weights)	+14.4%	+17.3%	−22.4%
12-month return 50% + 52-week high 50%	+19.1%	+23.2%	−29.3%
12-month return + low-vol slot split	+21.7%	+29.7%	−24.9%
Low-vol only	+18.6%	+19.5%	−18.7%
Just hold KODEX 200	+15.4%	+25.3%	−40.8%

From 2020-08-07 · 2026-10-02 asset mix · top 50 by cap · monthly switch · 5 stocks (above 200-day) · 1 per ETF class · 0.15% one-way · KRW · random = same pool, filters, count

12-month return = 12-month return skipping the latest month · beat all 100 random draws over the full period (0/100 · 1/100 through 2025)

APPENDIX

⑤ Why these rules — date, exits, switching

Annual return and MDD, changing one setting at a time · adopted values marked (adopted)

Aggressive	~2025-12	~2026-10	MDD
1st of month (adopted)	+24.7%	+34.8%	−38.9%
8th of month	+25.8%	+33.0%	−42.3%
15th of month	+26.7%	+34.9%	−41.1%
22nd of month	+26.2%	+35.3%	−40.6%
Split into 4 staggered tranches	+25.9%	+34.5%	−40.7%
Stock take-profit +20	+21.4%	+26.9%	−19.6%
Stock take-profit +30	+19.6%	+24.7%	−19.2%
Stock take-profit +50	+22.2%	+29.0%	−20.2%
No stock take-profit (adopted)	+22.6%	+33.7%	−19.7%
Switch if outside top 5 (adopted)	+24.7%	+34.8%	−38.9%
Switch if outside top 7	+25.7%	+34.8%	−38.9%
Switch if outside top 10	+25.7%	+34.9%	−38.8%
Switch if outside top 15	+25.3%	+34.8%	−37.9%

Stop rules	~2025-12	~2026-10	MDD
Aggr. no rules	+24.7%	+34.8%	−38.9%
Aggr. stop −15	+21.7%	+32.5%	−28.3%
Aggr. PT −20	+24.7%	+34.8%	−38.9%
Aggr. adopted	+22.6%	+33.7%	−19.7%
Hold KODEX 200	+15.4%	+25.3%	−40.8%
Growth no rules	+18.7%	+24.6%	−28.2%
Growth stop −15	+18.5%	+25.2%	−23.3%
Growth adopted	+18.1%	+21.5%	−21.3%
Growth random	+19.0%	+23.5%	—
Growth index ETF	+19.1%	+24.2%	−25.2%

2020-08-07 – 2025-12-31 / – 2026-10-02 · new asset mix · top 50 by cap · first trading day · 0.15% one-way · KRW · idle cash 3% · date/switch rows without stops
Take-profit rows & adopted = stop −15 + portfolio +30/−20 (if hit, sell all, wait until next 1st)

APPENDIX

⑥ How we measured — conditions

- Period — from the same date 1, 2, 3 years ago to 2026-10-02 (same as benchmark indices) · rule comparisons from 2020-08-07
- Portfolio — bought at the profile asset mix on the start date, rebalanced on the first trading day monthly · KRW account
- Core — part of the KR/US equity slots held in index ETFs (KODEX 200 · SPY): Aggressive two-thirds · Growth 40%
- Picks — top by 12-month return skipping the latest month · 5 stocks (above 200-day) · 1 per ETF class · index ETF if short
- Universe — top 50 by market cap in KOSPI/KOSDAQ · top 50 S&P 500 names by market cap (members on that day) · ETFs (no ETNs, ELS or other structured products; no inverse)
- Selling — stock stop −15% (intraday low) · no stock take-profit · sell all at portfolio +30% / −20% and wait until the 1st of next month
- Cash · costs — deposits, MMF and idle cash at 3%/yr · 0.15% one-way · taxes and FX fees excluded
- Indices — KOSPI, KOSDAQ, S&P 500, Nasdaq, Dow price indices (ex-dividends) · US indices converted to KRW (Yahoo KRW=X)
- Limits — 6 years of data with one big bear market (2022) · stocks dropped from the S&P 500 in between have no data and are missing (some survivorship bias) · ETF candidates are today's list
- Full source — 'Money Puzzle Investment Engine — Design Rationale and Validation Record v2.0' (confidential)
